BASICS

Checking version

openssI version -a

How fast it runs on the system using four CPU cores and testing RSA algorithm

openssl speed -multi 4 rsa

Get basic help

openssl help

Generate 20 random bytes and show them on screen

openssI rand -hex 20

ENCODING / DECODING

Encoding a file using Base64

openssI base64 -in file.data

Encoding some text using Base64

echo -n "some text" | openssl base64

Base64 decode a file with output to another file

openssI base64 -d -in encoded.data -out decoded.data

WORKING WITH HASHES

List digest algorithms available

openssl list -digest-algorithms

Hash a file using SHA256

openssl dgst -sha256 file.data

Hash a file using SHA256 with its output in binary form (no output hex encoding)

No ASCII or encoded characters will be printed out to the console, just pure bytes. You can append ' | xxd'

openssl dgst -binary -sha256 file.data

Hash text using SHA3-512

echo -n "some text" | openssl dgst -sha3-512

Create HMAC - SHA384 of a file using a specific key in bytes

openssl dgst -SHA384 -mac HMAC -macopt hexkey:369bd7d655 file.data

Create HMAC - SHA512 of some text

echo -n "some text" | openssl dgst -mac HMAC -macopt hexkey:369bd7d655 -sha512

ASYMMETRIC ENCRYPTION

List elliptic curves available

openssl ecparam -list_curves

Create 4096 bits RSA public-private key pair

openssl genrsa -out pub_priv.key 4096

Display detailed private key information

openssl rsa -text -in pub_priv.key -noout

Encrypt public-private key pair using AES-256 algorithm

openssl rsa -in pub_priv.key -out encrypted.key -aes256

Remove keys file encryption and save them to another file

openssI rsa -in encrypted.key -out cleartext.key

Copy the public key of the public-private key pair file to another file openssI rsa -in pub_priv.key -pubout -out pubkey.key

Encrypt a file using RSA public key

openssI rsautI -encrypt -inkey pubkey.key -pubin -in cleartext.file -out ciphertext.file

Decrypt a file using RSA private key

openssI rsautI -decrypt -inkey pub_priv.key -in ciphertext.file out decrypted.file

Create private key using the P-224 elliptic curve

openssl ecparam -name secp224k1 -genkey -out ecpriv.key

Encrypt private key using 3DES algorithm

openssI ec -in ecP384priv.key -des3 -out ecP384priv_enc.key

SYMMETRIC ENCRYPTION

List all supported symmetric encryption ciphers

openssl enc -list

Encrypt a file using an ASCII encoded password provided and AES-128-ECB algorithm

openssI enc -aes-128-ecb -in cleartext.file -out ciphertext.file pass pass:thisisthepassword

Decrypt a file using AES-256-CBC and a keyfile

openssl enc -d -aes-256-cbc -in ciphertext.file -out cleartext.file -pass file:./key.file

by Alberto González (albertx) via cheatography.com/122237/cs/22629/

SYMMETRIC ENCRYPTION (cont)

Encrypt a file using a specific encryption key (K) provided as hex digits openssl enc -aes-128-ecb -in cleartext.file -out ciphertext.file -K 1881807b2d1b3d22f14e9ec52563d981 -nosalt

Encrypt a file using ARIA 256 in CBC block cipher mode using a specified encryption key (K:256 bits) and initialization vector (iv:128 bits) openssl enc -aria-256-cbc -in cleartext.file -out ciphertext.file -K f92d2e986b7a2a01683b4c40d0cbcf6feaa669ef2bb5ec3a25ce85d9548291c1 -iv 470bc29762496046882b61ecee68e07c -nosalt

Encrypt a file using Camellia 192 algorithm in COUNTER block cipher mode with key and iv provided

openssI enc -camellia-192-ctr -in cleartext.file -out ciphertext.file -K 6c7a1b3487d28d3bf444186d7c529b48d67dd6206c7a1b34 -iv 470bc29762496046882b61ecee68e07c

DIGITAL SIGNATURES

Generate DSA parameters for the private key. 2048 bits length openssI dsaparam -out dsaparam.pem 2048

Generate DSA public-private key for signing documents and protect it using AES128 algorithm

openssl gendsa -out dsaprivatekey.pem -aes-128-cbc dsaparam.pem

Copy the public key of the DSA public-private key file to another file openssl dsa -in dsaprivatekey.pem -pubout -out dsapublickey.pem

To print out the contents of a DSA key pair file openssI dsa -in dsaprivatekey.pem -text -noout

Signing the sha-256 hash of a file using RSA private key

openssl dgst -sha256 -sign rsakey.key -out signature.data document.pdf

Verify a SHA-256 file signature using a public key

openssI dgst -sha256 -verify publickey.pem -signature signature.data original.file

Signing the sha3-512 hash of a file using DSA private key

openssI pkeyutI -sign -pkeyopt digest:sha3-512 -in document.docx -inkey dsaprivatekey.pem -out signature.data

DIGITAL SIGNATURES (cont)

Verify DSA signature

openssI pkeyutI -verify -sigfile dsasignature.data - inkey dsakey.pem -in document.docx

Create a private key using P-384 Elliptic Curve openssI ecparam -name secp384r1 -genkey -out ecP384priv.key

Encrypt private key using 3DES algorithm openssl ec -in ecP384priv.key -des3 -out ecP384priv_enc.key

Sign a PDF file using Elliptic Curves with the generated key openssI pkeyutI -sign -inkey ecP384priv_enc.key - pkeyopt digest:sha3-512 -in document.pdf -out signature.data

Verify the file's signature. If it's ok you must receive "Signature Verified Successfully"

openssI pkeyutI -verify -in document.pdf -sigfile signature.data -inkey ecP384priv enc.key

DIGITAL CERTIFICATES

Generating a CSR file and a 4096 bits RSA key pair openssI req -newkey rsa:4096 -keyout private.key -out request.csr

Display Certificate Signing Request (CSR) content openssl req -text -noout -in request.csr

Display the public key contained in the CSR file openssI req -pubkey -noout -in request.csr

Creating a Certificate Signing Request (CSR) using an existing private key. This can be useful when you need to renew the public digital certificate without changing the private key.

openssl req -new -key private.key -out request.csr

Create EC P384 curve parameters file to generate a CSR using Elliptic Curves in the next step.

openssl genpkey -genparam -algorithm EC -out
EC_params.pem -pkeyopt
ec_paramgen_curve:secp384r1 -pkeyopt
ec_param_enc:named_curve

DIGITAL CERTIFICATES (cont)

Create a CSR file using Elliptic Curve P384 parameters file created in the previous step. *Instead of using RSA keys*.

openssl req -newkey ec:EC_params.pem -keyout EC_P384_priv.key -out EC_request.csr

Create a self-signed certificate, a new 2048 bits RSA key pair with one year of validity

openssl req -newkey rsa:2048 -nodes -keyout priv.key -x509 -days 365 -out cert.crt

Create and sign a new certificate using the CSR file and the private key for signing (you must have a openssl.cnf file prepared)

openssl ca -in request.csr -out certificate.crt -config /CA/config/openssl.cnf

Display PEM format certificate information openssl x509 -text -noout -in cert.crt

Display certificate information in Abstract Sintax Notation One (ASN.1)

openssl asn1parse -in cert.crt

Extract the certificate's public key

openssl x509 -pubkey -noout -in cert.crt

Extract the public key's modulus in the certificate

openssl x509 -modulus -noout -in cert.crt

Extract the domain certificate from an HTTPS/TLS connection openssI s_client -connect domain.com:443 | openssI x509 -out certificate.crt

Convert a certificate from PEM to DER format

openssl x509 -inform PEM -outform DER -in cert.crt -out cert.der

Checking whether the certificate pubic key matches a private key and request file. One step per file. Must match in the output hashes.

openssI x509 -modulus -in certificate.crt -noout | openssI dgst -

openssI rsa -modulus -in private.key -noout | openssI dgst sha256

openssI req -modulus -in request.csr -noout | openssI dgst sha256

WORKING WITH TLS PROTOCOL

List all cipher suites supported

openssl ciphers -V 'ALL'

List all cipher suites supported with AES

openssl ciphers -V 'AES'

List all cipher suites supporting CAMELLIA & SHA256 algorithms.

openssl ciphers -V 'CAMELLIA+SHA256'

TLS connection to a server using port 443 (HTTPS)

openssl s_client -connect domain.com:443

TLS connection to a server using v1.2

openssl s_client -tls1_2 -connect domain.com:443

TLS connection & disable v1.0

openssl s_client -no_tls1 domain.com:443

TLS connection using a specific cipher suite openssI s_client -cipher DHE-RSA-AES256-GCM-SHA384

domain.com:443

TLS connection displaying all certificates provided by server openssl s_client -showcerts domain.com:443

Setting up a listening port to receive TLS connections using a certificate, the private key & supporting only TLS 1.2

openssI s_server -port 443 -cert cert.crt -key priv.key -tls1_2

Extract the domain certificate from an HTTPS/TLS connection openssI s_client -connect domain.com:443 | openssI x509 -out certificate.crt

nmap command: Display enabled cipher-suites over an HTTPS/TLS Connection

nmap --script ssl-enum-ciphers -p 443 domain.com

nmap command: Display enabled cipher-suites over a TLS (HTTPS) Connection using SNI. (change it to desired IP & domain name)

nmap --script ssl-enum-ciphers --script-

args=tls.servername=domain.com 172.67.129.11

PERSONAL SECURITY ENVIRONMENTS (PSE)

Convert a certificate from PEM (base64) to DER (binary) format openssl x509 -in certificate.pem -outform DER -out certificate.der

Insert certificate & private key into PKCS #12 format file. These files can be imported in windows certificate manager or to a Java Key Store (jks) file

openssI pkcs12 -export -out cert_key.p12 -inkey private.key -in certificate.crt

To show the contents of a PKCS #12 file openssI pkcs12 -in cert_key.p12

Convert the .p12 file into a Java Key Store. *This commnad uses java keytool instead of openssl.*

keytool -importkeystore -destkeystore javakeystore.jks - srckeystore cert_key.p12 -srcstoretype pkcs12

Convert PEM certificate to PKCS #7 format

openssl crl2pkcs7 -nocrl -certfile certificate.crt -out cert.p7b

Convert a PKCS #7 file from PEM to DER

openssl pkcs7 -in cert.p7b -outform DER -out p7.der

SIMPLE CA CONFIGURATION FILE (openssl.cnf)

FINAL NOTES

- All openssI commands were tested using OpenSSL version 1.1.1f
- All nmap commands were tested using nmap version 7.80. nmap is compiled using opensal libraries.
- The default format for almost all operations in openssl is PEM, however you can always specify a DER format using arguments or export to other formats with appropriate commands indicated on the document.
